```

- Add reorder_levels method to Series and DataFrame (GH534)
- Add dict-like get function to DataFrame and Panel (GH521)
- Add DataFrame.iterrows method for efficiently iterating through the rows of a DataFrame
- Add DataFrame.to_panel with code adapted from LongPanel.to_long
- Add reindex_axis method added to DataFrame
- Add level option to binary arithmetic functions on DataFrame and Series
- Add level option to the reindex and align methods on Series and DataFrame for broadcasting values across a level (GH542, GH552, others)
- Add attribute-based item access to Panel and add IPython completion (GH563)
- Add logy option to Series.plot for log-scaling on the Y axis
- Add index and header options to DataFrame.to_string
- Can pass multiple DataFrames to DataFrame. join to join on index (GH115)
- Can pass multiple Panels to Panel. join (GH115)
- Added justify argument to DataFrame.to_string to allow different alignment of column headers
- Add sort option to GroupBy to allow disabling sorting of the group keys for potential speedups (GH595)
- Can pass MaskedArray to Series constructor (GH563)
- Add Panel item access via attributes and IPython completion (GH554)
- Implement DataFrame.lookup, fancy-indexing analogue for retrieving values given a sequence of row and column labels (GH338)
- Can pass a *list of functions* to aggregate with groupby on a DataFrame, yielding an aggregated result with hierarchical columns (GH166)
- Can call cummin and cummax on Series and DataFrame to get cumulative minimum and maximum, respectively (GH647)
- value_range added as utility function to get min and max of a dataframe (GH288)
- Added encoding argument to read_csv, read_table, to_csv and from_csv for non-ascii text
 (GH717)
- Added abs method to pandas objects
- Added crosstab function for easily computing frequency tables
- Added is in method to index objects
- Added level argument to xs method of DataFrame.

API changes to integer indexing

One of the potentially riskiest API changes in 0.7.0, but also one of the most important, was a complete review of how **integer indexes** are handled with regard to label-based indexing. Here is an example:

```
In [3]: s = pd.Series(np.random.randn(10), index=range(0, 20, 2))
In [4]: s
Out [4]:
     -1.294524
2
      0.413738
4
     0.276662
     -0.472035
6
8
     -0.013960
     -0.362543
10
12
     -0.006154
14
     -0.923061
16
     0.895717
      0.805244
18
Length: 10, dtype: float64
In [5]: s[0]
Out [5]: -1.2945235902555294
In [6]: s[2]
Out[6]: 0.41373810535784006
In [7]: s[4]
Out[7]: 0.2766617129497566
```

This is all exactly identical to the behavior before. However, if you ask for a key **not** contained in the Series, in versions 0.6.1 and prior, Series would *fall back* on a location-based lookup. This now raises a KeyError:

```
In [2]: s[1]
KeyError: 1
```

This change also has the same impact on DataFrame:

In order to support purely integer-based indexing, the following methods have been added:

5.20. Version 0.7 3063

Method	Description
Series.iget_value(i)	Retrieve value stored at location i
Series.iget(i)	Alias for iget_value
DataFrame.irow(i)	Retrieve the i-th row
DataFrame.icol(j)	Retrieve the j-th column
<pre>DataFrame.iget_value(i, j)</pre>	Retrieve the value at row i and column j

API tweaks regarding label-based slicing

Label-based slicing using ix now requires that the index be sorted (monotonic) **unless** both the start and endpoint are contained in the index:

```
In [1]: s = pd.Series(np.random.randn(6), index=list('gmkaec'))

In [2]: s
Out[2]:
g    -1.182230
m    -0.276183
k    -0.243550
a    1.628992
e    0.073308
c    -0.539890
dtype: float64
```

Then this is OK:

```
In [3]: s.ix['k':'e']
Out[3]:
k   -0.243550
a   1.628992
e   0.073308
dtype: float64
```

But this is not:

```
In [12]: s.ix['b':'h']
KeyError 'b'
```

If the index had been sorted, the "range selection" would have been possible:

```
In [4]: s2 = s.sort_index()

In [5]: s2
Out[5]:
a     1.628992
c    -0.539890
e     0.073308
g    -1.182230
k    -0.243550
m    -0.276183
dtype: float64

In [6]: s2.ix['b':'h']
Out[6]:
c    -0.539890
```

(continues on next page)

(continued from previous page)

```
e 0.073308
g -1.182230
dtype: float64
```

Changes to Series [] operator

As as notational convenience, you can pass a sequence of labels or a label slice to a Series when getting and setting values via [] (i.e. the __getitem__ and __setitem__ methods). The behavior will be the same as passing similar input to ix except in the case of integer indexing:

```
In [8]: s = pd.Series(np.random.randn(6), index=list('acegkm'))
In [9]: s
Out[9]:
  -1.206412
    2.565646
C
    1.431256
е
    1.340309
  -1.170299
  -0.226169
Length: 6, dtype: float64
In [10]: s[['m', 'a', 'c', 'e']]
Out[10]:
  -0.226169
   -1.206412
    2.565646
    1.431256
Length: 4, dtype: float64
In [11]: s['b':'l']
Out[11]:
    2.565646
    1.431256
    1.340309
  -1.170299
Length: 4, dtype: float64
In [12]: s['c':'k']
Out[12]:
    2.565646
    1.431256
е
    1.340309
   -1.170299
Length: 4, dtype: float64
```

In the case of integer indexes, the behavior will be exactly as before (shadowing ndarray):

```
In [13]: s = pd.Series(np.random.randn(6), index=range(0, 12, 2))
In [14]: s[[4, 0, 2]]
Out[14]:
4     0.132003
0     0.410835
2     0.813850
```

(continues on next page)

5.20. Version 0.7 3065

(continued from previous page)

```
Length: 3, dtype: float64

In [15]: s[1:5]
Out[15]:
2    0.813850
4    0.132003
6    -0.827317
8    -0.076467
Length: 4, dtype: float64
```

If you wish to do indexing with sequences and slicing on an integer index with label semantics, use ix.

Other API changes

- The deprecated LongPanel class has been completely removed
- If Series.sort is called on a column of a DataFrame, an exception will now be raised. Before it was possible to accidentally mutate a DataFrame's column by doing df[col].sort() instead of the side-effect free method df[col].order() (GH316)
- Miscellaneous renames and deprecations which will (harmlessly) raise FutureWarning
- drop added as an optional parameter to DataFrame.reset_index (GH699)

Performance improvements

- Cythonized GroupBy aggregations no longer presort the data, thus achieving a significant speedup (GH93). GroupBy aggregations with Python functions significantly sped up by clever manipulation of the ndarray data type in Cython (GH496).
- Better error message in DataFrame constructor when passed column labels don't match data (GH497)
- Substantially improve performance of multi-GroupBy aggregation when a Python function is passed, reuse ndarray object in Cython (GH496)
- Can store objects indexed by tuples and floats in HDFStore (GH492)
- Don't print length by default in Series.to string, add *length* option (GH489)
- Improve Cython code for multi-groupby to aggregate without having to sort the data (GH93)
- Improve MultiIndex reindexing speed by storing tuples in the MultiIndex, test for backwards unpickling compatibility
- Improve column reindexing performance by using specialized Cython take function
- Further performance tweaking of Series. __getitem__ for standard use cases
- Avoid Index dict creation in some cases (i.e. when getting slices, etc.), regression from prior versions
- Friendlier error message in setup.py if NumPy not installed
- Use common set of NA-handling operations (sum, mean, etc.) in Panel class also (GH536)
- Default name assignment when calling reset_index on DataFrame with a regular (non-hierarchical) index (GH476)
- Use Cythonized groupers when possible in Series/DataFrame stat ops with level parameter passed (GH545)
- Ported skiplist data structure to C to speed up rolling_median by about 5-10x in most typical use cases (GH374)

5.21 Version 0.6

5.21.1 v.0.6.1 (December 13, 2011)

New features

- Can append single rows (as Series) to a DataFrame
- Add Spearman and Kendall rank correlation options to Series.corr and DataFrame.corr (GH428)
- Added get_value and set_value methods to Series, DataFrame, and Panel for very low-overhead access (>2x faster in many cases) to scalar elements (GH437, GH438). set_value is capable of producing an enlarged object.
- Add PyQt table widget to sandbox (GH435)
- DataFrame.align can accept Series arguments and an axis option (GH461)
- Implement new *SparseArray* and *SparseList* data structures. SparseSeries now derives from SparseArray (GH463)
- Better console printing options (GH453)

5.21. Version 0.6 3067

- Implement fast *data ranking* for Series and DataFrame, fast versions of scipy.stats.rankdata (GH428)
- Implement *DataFrame.from_items* alternate constructor (GH444)
- DataFrame.convert_objects method for inferring better dtypes for object columns (GH302)
- Add rolling_corr_pairwise function for computing Panel of correlation matrices (GH189)
- Add margins option to pivot table for computing subgroup aggregates (GH114)
- Add Series.from csv function (GH482)
- Can pass DataFrame/DataFrame and DataFrame/Series to rolling_corr/rolling_cov (GH #462)
- MultiIndex.get_level_values can accept the level name

Performance improvements

- Improve memory usage of DataFrame.describe (do not copy data unnecessarily) (PR #425)
- Optimize scalar value lookups in the general case by 25% or more in Series and DataFrame
- Fix performance regression in cross-sectional count in DataFrame, affecting DataFrame.dropna speed
- Column deletion in DataFrame copies no data (computes views on blocks) (GH #158)

5.21.2 v.0.6.0 (November 25, 2011)

New features

- Added melt function to pandas.core.reshape
- Added level parameter to group by level in Series and DataFrame descriptive statistics (GH313)
- Added head and tail methods to Series, analogous to to DataFrame (GH296)
- Added Series.isin function which checks if each value is contained in a passed sequence (GH289)
- Added float_format option to Series.to_string
- Added skip_footer (GH291) and converters (GH343) options to read_csv and read_table
- Added drop_duplicates and duplicated functions for removing duplicate DataFrame rows and checking for duplicate rows, respectively (GH319)

- Implemented operators '&', 'I', '^', '-' on DataFrame (GH347)
- Added Series.mad, mean absolute deviation
- Added QuarterEnd DateOffset (GH321)
- Added dot to DataFrame (GH65)
- Added orient option to Panel.from dict (GH359, GH301)
- Added orient option to DataFrame.from dict
- Added passing list of tuples or list of lists to DataFrame.from_records (GH357)
- Added multiple levels to groupby (GH103)
- Allow multiple columns in by argument of DataFrame.sort_index (GH92, GH362)
- Added fast get_value and put_value methods to DataFrame (GH360)
- Added cov instance methods to Series and DataFrame (GH194, GH362)
- Added kind='bar' option to DataFrame.plot (GH348)
- Added idxmin and idxmax to Series and DataFrame (GH286)
- Added read_clipboard function to parse DataFrame from clipboard (GH300)
- Added nunique function to Series for counting unique elements (GH297)
- Made DataFrame constructor use Series name if no columns passed (GH373)
- Support regular expressions in read_table/read_csv (GH364)
- Added DataFrame.to_html for writing DataFrame to HTML (GH387)
- Added support for MaskedArray data in DataFrame, masked values converted to NaN (GH396)
- Added DataFrame.boxplot function (GH368)
- Can pass extra args, kwds to DataFrame.apply (GH376)
- Implement DataFrame.join with vector on argument (GH312)
- Added legend boolean flag to DataFrame.plot (GH324)
- Can pass multiple levels to stack and unstack (GH370)
- Can pass multiple values columns to pivot_table (GH381)
- Use Series name in GroupBy for result index (GH363)
- Added raw option to DataFrame.apply for performance if only need ndarray (GH309)
- Added proper, tested weighted least squares to standard and panel OLS (GH303)

Performance enhancements

- VBENCH Cythonized cache_readonly, resulting in substantial micro-performance enhancements throughout the code base (GH361)
- VBENCH Special Cython matrix iterator for applying arbitrary reduction operations with 3-5x better performance than np.apply_along_axis (GH309)
- VBENCH Improved performance of MultiIndex.from_tuples
- VBENCH Special Cython matrix iterator for applying arbitrary reduction operations
- VBENCH + DOCUMENT Add raw option to DataFrame.apply for getting better performance when

5.21. Version 0.6 3069

- VBENCH Faster cythonized count by level in Series and DataFrame (GH341)
- VBENCH? Significant GroupBy performance enhancement with multiple keys with many "empty" combinations
- VBENCH New Cython vectorized function map_infer speeds up Series.apply and Series.map significantly when passed elementwise Python function, motivated by (GH355)
- VBENCH Significantly improved performance of Series.order, which also makes np.unique called on a Series faster (GH327)
- VBENCH Vastly improved performance of GroupBy on axes with a MultiIndex (GH299)

5.22 Version 0.5

5.22.1 v.0.5.0 (October 24, 2011)

New features

- Added DataFrame.align method with standard join options
- Added parse_dates option to read_csv and read_table methods to optionally try to parse dates in the index columns
- Added nrows, chunksize, and iterator arguments to read_csv and read_table. The last two return a new TextParser class capable of lazily iterating through chunks of a flat file (GH242)
- Added ability to join on multiple columns in DataFrame. join (GH214)
- Added private _get_duplicates function to Index for identifying duplicate values more easily (ENH5c)
- Added column attribute access to DataFrame.
- Added Python tab completion hook for DataFrame columns. (GH233, GH230)
- Implemented Series.describe for Series containing objects (GH241)
- Added inner join option to DataFrame. join when joining on key(s) (GH248)
- Implemented selecting DataFrame columns by passing a list to __getitem__ (GH253)

- Implemented & and I to intersect / union Index objects, respectively (GH261)
- Added pivot_table convenience function to pandas namespace (GH234)
- Implemented Panel.rename_axis function (GH243)
- DataFrame will show index level names in console output (GH334)
- Implemented Panel.take
- Added set eng float format for alternate DataFrame floating point string formatting (ENH61)
- Added convenience set_index function for creating a DataFrame index from its existing columns
- Implemented groupby hierarchical index level name (GH223)
- Added support for different delimiters in DataFrame.to_csv (GH244)
- TODO: DOCS ABOUT TAKE METHODS

Performance enhancements

- VBENCH Major performance improvements in file parsing functions read_csv and read_table
- VBENCH Added Cython function for converting tuples to ndarray very fast. Speeds up many MultiIndex-related operations
- VBENCH Refactored merging / joining code into a tidy class and disabled unnecessary computations in the float/object case, thus getting about 10% better performance (GH211)
- VBENCH Improved speed of DataFrame.xs on mixed-type DataFrame objects by about 5x, regression from 0.3.0 (GH215)
- VBENCH With new DataFrame.align method, speeding up binary operations between differently-indexed DataFrame objects by 10-25%.
- VBENCH Significantly sped up conversion of nested dict into DataFrame (GH212)
- VBENCH Significantly speed up DataFrame ___repr__ and count on large mixed-type DataFrame objects

Contributors

5.22. Version 0.5 3071

5.23 Version 0.4

5.23.1 v.0.4.1 through v0.4.3 (September 25 - October 9, 2011)

New features

- Added Python 3 support using 2to3 (GH200)
- Added name attribute to Series, now prints as part of Series. ___repr___
- Added instance methods is null and not null to Series (GH209, GH203)
- Added Series . align method for aligning two series with choice of join method (ENH56)
- Added method get_level_values to MultiIndex (GH188)
- Set values in mixed-type DataFrame objects via .ix indexing attribute (GH135)
- Added new DataFrame methods get dtype counts and property dtypes (ENHdc)
- Added ignore_index option to DataFrame.append to stack DataFrames (ENH1b)
- read_csv tries to sniff delimiters using csv. Sniffer (GH146)
- read_csv can *read* multiple columns into a MultiIndex; DataFrame's to_csv method writes out a corresponding MultiIndex (GH151)
- DataFrame . rename has a new copy parameter to rename a DataFrame in place (ENHed)
- *Enable* unstacking by name (GH142)
- Enable sortlevel to work by level (GH141)

Performance enhancements

- Altered binary operations on differently-indexed SparseSeries objects to use the integer-based (dense) alignment logic which is faster with a larger number of blocks (GH205)
- Wrote faster Cython data alignment / merging routines resulting in substantial speed increases
- Improved performance of isnull and notnull, a regression from v0.3.0 (GH187)
- Refactored code related to DataFrame.join so that intermediate aligned copies of the data in each DataFrame argument do not need to be created. Substantial performance increases result (GH176)
- Substantially improved performance of generic Index.intersection and Index.union
- Implemented BlockManager.take resulting in significantly faster take performance on mixed-type DataFrame objects (GH104)
- Improved performance of Series.sort_index
- Significant groupby performance enhancement: removed unnecessary integrity checks in DataFrame internals that were slowing down slicing operations to retrieve groups
- Optimized _ensure_index function resulting in performance savings in type-checking Index objects
- Wrote fast time series merging / joining methods in Cython. Will be integrated later into DataFrame.join and related functions
